very comfortable	2	22.2%
somewhat comfortable	3	33.3%
somewhat uncomfortable	4	44.4%
very uncomfortable	0	0%

What would you still like to learn about Google Sheets?

it is a great tool, but I need a whole lot more practice using it.

I just need to expand my expertise by USING it! The way it was presented made it easy, now I have to apply it and keep on using this so I don't forget. This was the easiest lesson on spread sheets I have ever attended. I really believe I can do this again without help.

I love this. I will need continued practice before I am ready to use. Holli has a superior knowledge base for instruction and made this class interesting and fun. I will most definitely seek her out with questions and additional tutorials.

This was a great introduction - now I have to play with it. It seems so similar to Excel that I think I will be able to navigate it pretty well.

more practice
I am looking forward to time and opportunity to practice using Sheets. I think it will be a the perfect "frame" for lots of information and data.

How do you think you could use Google Sheets with your students or your peers?

With peers - sharing beginning of the year test results to quickly grop students into phonics class.

For students - in math it would be a great way for them to experience the graphing function and see how the chart changes when the data is updated.

To chart progress of lack of progress in a specific area across time. This workshop was a fine introduction to a resource with great potential for me.

I will definitely add my grade book here!

yes

Making graphs in math and science, organizing placement tests, class grades, just to start!

As I get more practice with google sheets it will become more obvious how to apply it.

I will definitely use it for collecting data on standardized tests.
